

SK2000TC-INF Tire Inflation Control Box

HABCO
ENGINEERING YOUR ADVANTAGE
TESTING & SUPPORT EQUIPMENT

The SK2000TC-INF Tire Inflation Control Box is a self contained controller designed to insure operator safety while inflating Aircraft and Heavy Truck Tires. It features digital indication of tire pressure with a joystick control to safely inflate or bleed the tire. Safety features include an internal pressure limiter which can be adjusted to match the type of tire being serviced. It is available in both wall mount and pedestal configuration. When combined with any of the HABCO tire cages, it provides the best safety combination on the market today.

Feature	Benefit	Why choose our product?
Minimum 10' safety radius	Ensures operator is not near the tire being inflated	Ensures OSHA spec is met
Digital pressure indication	Exact tire pressure visible at a glance	No guesswork needed
Deadman controls	Cannot accidentally leave fill valve open	Fail safes in place
Adjustable pressure limiter	Can be set to limit maximum tire pressure	Eliminates ability to be overinflated
Wall or pedestal mountable	Flexible for all environments	Ensures operator safety

Specifications

Dimensions	17"W x 12"D x 10"H 50"H with optional pedestal mount	Power Req.	120 VAC. Nitrogen or shop air up to 400 PSIG
Weight	30 lbs - wall mount 55 lbs - with pedestal	Accessories	Floor mount pedestal
Case Material	Steel		
Pressure Range	0-200 PSIG		
Pressure Accuracy	±0.25% up to 200 PSIG		

Contract Holder
Contract GS-07F5787P

The HABCO Difference: Everything you need, just as you need it, right when you need it

As the leader in testing & ground support equipment for more than 40 years, HABCO has consistently provided its customers everything they need, just as they need it, right when they need it - with unparalleled attention to detail & customer support. How? Through its unmatched, highly focused & passionately dedicated staff, who draw daily upon their unique capabilities & extensive experience in electro-mechanical systems, user-friendly software & design for lean manufacturing, to consistently anticipate the needs of their customers & routinely exceed their expectations.
